

METHOD FOR IMPROVING OIL DESALTING  
BY FORMING UNSTABLE WATER-IN-OIL EMULSIONS

Abstract of the Disclosure

5

A method for determination for a given oil the relative stability of a water-in-oil emulsion that will be formed by that oil with water comprises measuring for the given oil the weight fraction of the oil that is most strongly adsorbed on a silica gel column successively eluted with n-hexane, toluene and  
10 methylene chloride - methanol mixture solvents and determining whether said weight fraction is greater than about 0.05; with a value above 0.05 being determinative of an emulsion more stable than one with a value less than 0.05.
